

- *High 12 bit resolution and 30 kHz switching speed*
- *3 push-button setting with 4-digit display indication*
- *All setting modes: automatic, manual or dynamic*
- *PNP or NPN output with RS485 serial interface for data transmission*

## S65-W SERIES

The **S65-W** series offers, in a sturdy standard compact 50x50 mm ABS housing with IP67 mechanical protection, an advanced contrast sensor for the detection of register marks and other neutral or coloured targets.

The state-of-the-art technology with wide-spectrum white LED emission guarantees the detection of all contrasts, such as marks or objects very similar to their backgrounds or in presence of different surface treatments or workings.

The control panel presents three push-buttons for easy and immediate setting and a 4-digit display that indicates the configuration parameters and the level of received signal without the need of connecting external devices.

Different operating modes, automatic *EASYtouch™* and fine, manual and dynamic, allow extremely easy and precise object detection.

Models with only one NPN or PNP switching output are available, or with RS485 serial interface for data transmission as well as an analogue monitoring output proportional to the received light intensity. Electric connection is made by means of a standard 5 or 8-pole connector according to the model.

# W CONTRAST SENSORS

Sensor setting can be made in four different modes; **EASYtouch™** with one SET push-button pressure for a quicker setting, **fine** pressing twice the SET push-button for better precision, **manual** for rapid setting correction using the +/- push-buttons and **dynamic** for the detection of moving targets. The timing function allows to set a delay of the output activation or deactivation, to avoid the detection of temporarily rapid changes, improve interfacing with slower systems or synchronise activator activation without needing external timers.

## DIMENSIONS

mm

## INDICATORS AND SETTINGS

- A** Output status LED
- B** Stability LED
- C** Delay ON LED
- D** Delay OFF LED
- E** 4-digit display
- F** +/- push-buttons
- G** SET push-button
- H** M12 connector output, orientable on two positions

## ACCESSORIES

For dedicated accessories refer to the **ACCESSORIES** section of this catalogue.

Refer also to **Connectors (A.03)** and **Fixing Brackets (A.04)** of the **General Catalogue**.

## CONNECTIONS

**M12 5-POLE CONNECTOR**

**M12 8-POLE CONNECTOR**

## TECHNICAL NOTES

- <sup>1</sup> Limit values
- <sup>2</sup> Average life of 100.000 h with  $T_A = +25^\circ\text{C}$
- <sup>3</sup> Is activated at powering with remote input connected to +Vdc for at least 1 sec.
- <sup>4</sup> Connector can be blocked on two positions
- <sup>5</sup> A - reverse polarity protection  
B - overload and short-circuit protection
